

Rotating Basin Site Summary Wichita Mountains Level 4 Ecoregion: Comanche County

The Oklahoma Conservation Commission (OCC) has the statutory responsibility of monitoring streams across the state in order to identify healthy streams as well as those which may be impacted by non-point source (NPS) pollution. NPS pollution is pollution which runs off the land from diffuse sources rather than being discharged from a specific source. If a stream is found to be impaired by NPS pollution, the OCC may be able to implement a voluntary cost-share program to address the identified problems; however, streams must be monitored in order to select the best management practices necessary for improvement. The OCC's "Rotating Basin Monitoring Program" provides the tools to assess and then restore water quality in Oklahoma.

This leaflet gives a brief summary of the assessment results for the first cycle of the monitoring program for the only stream monitored in the Wichita Mountains ecoregion. The full report can be accessed online at: http://www.ok.gov/okcc/Agency_Divisions/Water_Quality_Division/WQ_Reports/WQ_Assessment_Reports or by calling (405) 522-4500 and requesting a copy of the "Rotating Basin Year 4 Final Report."

OCC Rotating Basin monitoring site within Wichita Mountains ecoregion.

Through the Rotating Basin Program, one stream in the Wichita Mountains ecoregion was sampled approximately every five weeks from June 2004-June 2006. Nineteen water quality parameters were measured or analyzed at each site visit. In addition, OCC staff conducted one fish and habitat assessment and four macroinvertebrate collections during this time. Summer samples were also analyzed for *E. coli* and *Enterococcus* bacteria. The site was compared to "high quality" streams in the ecoregion, streams known to have high quality fish populations, benthic macroinvertebrate populations, instream and riparian habitat, and water quality. All of the data collected has been distilled into a few key components in order to produce an index score of general, overall stream health, shown on the next page.

Summary of general stream health as determined by comparison to high quality streams in the Wichita Mountains ecoregion and by assessment using Oklahoma State Water Quality Standards†.

good poor	Good
	Medicine Creek
Overall Stream Health	53
Phosphorus	5
Nitrogen	5
Ammonia	5
Dissolved Oxygen	5
рН	5
Turbidity	5
Salts (chloride, sulfate, TDS)	5
Fish	5
Macroinvertebrates	5
Instream/Riparian Habitat	5
Bacteria	3
	Scale of 1-5 with 5 being the best

KEY: 3=not as good as high quality sites but not impaired 5=equal to or better than high quality sites in the area

Medicine Creek (OK311300-04-0060H): This stream is not impaired. All values equal to or better than high quality sites in the ecoregion with the exception of bacteria levels, which were slightly elevated but not high enough for impairment.
