

Sallisaw Creek Watershed

Dam No. 18M Adair County, Oklahoma

Protecting Our People - Protecting Our Natural Resources

This is one of 2,107 examples of how local, state and federal government agencies have utilized the Natural Resources Conservation Service Watershed Program to address natural resource needs and improve the quality of life for thousands of Oklahomans.*

Sallisaw Creek Watershed Dam No. 18M Adair County, Oklahoma

Sallisaw Creek Watershed Dam No. 18M is located five and one-half miles southwest of Stilwell, Oklahoma. The dam, one of 2,107 flood control dams in the state, provides multiple benefits for the citizens of Adair County and surrounding areas.

The dam was constructed in 1965 by the City of Stilwell and the Adair County Conservation District with the assistance of the Oklahoma Conservation Commission and the USDA Natural Resources Conservation Service (NRCS) Watershed Protection and Flood Prevention Program.

The 68-foot high dam has created a 188 surface acre lake that provides flood protection and a water supply for the City of Stilwell and rural water districts. The city paid for adding an additional 3,000 acre feet of water storage during construction for use for municipal water.

In 2009 the dam was rehabilitated to bring it up to current dam safety criteria and to extend its life for another 100 years. Rehabilitation of the dam will result in \$20.7 million in benefits over its extended 100-year life from flood and sediment reduction and water supply benefits and will reduce the potential for loss of life.

The dam is one of 34 constructed flood control dams in the Sallisaw Creek Watershed and together they provide an estimated \$2.6 million in average annual benefits from reduced flooding; water supplies; reduced damages to roads and bridges; and reduced sedimentation of streams and rivers.

Before the dams were constructed flooding was a major problem in the watershed. Between 1938 and 1957 there were 26 major floods (those where floodwaters covered more than 50 percent of the floodplain) and 144 smaller floods. These floods destroyed crops, caused soil erosion and damaged roads and bridges.

Sallisaw Creek Watershed Dam No. 18M provides flood control and municipal water to Adair County citizens.

"While the dam provides important flood control, the watershed lake provides much of the water for the City of Stilwell," said Mike Doublehead, Chief Operating Officer and General Manager for Stilwell Utilities and the Stilwell Area Development Authority. "We also supply rural water districts, which in turn provide many of our rural schools with water from this lake. This project insures our water supply will be stable well into the future."

The Sallisaw Creek Watershed Project is one of 129 projects in Oklahoma that have been planned and implemented by local people with assistance from the USDA Natural Resources Conservation Service and the Oklahoma Conservation Commission.

*2,107 NRCS-assisted flood control dams have been constructed in 61 Oklahoma Counties that provide over \$81 million in average annual benefits.
