

Oklahoma Scenic Rivers Joint Phosphorus Study: Interim Report, 30 September 2016

Principal Investigator:

Ryan S. King

*Professor, Department of Biology, Center for Reservoir and Aquatic Systems Research,
Baylor University, Waco, TX 76798*

www.baylor.edu/aquaticlab

Joint Study Committee Members:

Brian Haggard; Co-Chair (University of Arkansas)

Marty Matlock (University of Arkansas)

Ryan Benefield (Arkansas Natural Resources Commission)

Derek Smithee; Co-Chair (Oklahoma Water Resources Board)

Shellie Chard-McClary (Oklahoma Dept. of Environmental Quality)

Shanon Philips (Oklahoma Conservation Commission)

What is a nuisance level of benthic chlorophyll-a?

- 200 mg/m² is supported in literature as a nuisance level
 - May not apply to Ozark Highland rivers
 - Methods used to derive this number have been subjective
 - Sampling protocols used to select substrata, remove attached algae, and measure chlorophyll also may differ slightly from our study

What is a nuisance level of benthic chlorophyll-a?

- *Cladophora glomerata* is the dominant nuisance filamentous species
 - What level of TP leads to increases in *Cladophora* (we've looked at this already)
 - What level(s) of benthic chlorophyll-a corresponds to blooms of *Cladophora* in our data set? **
- Segmented regression

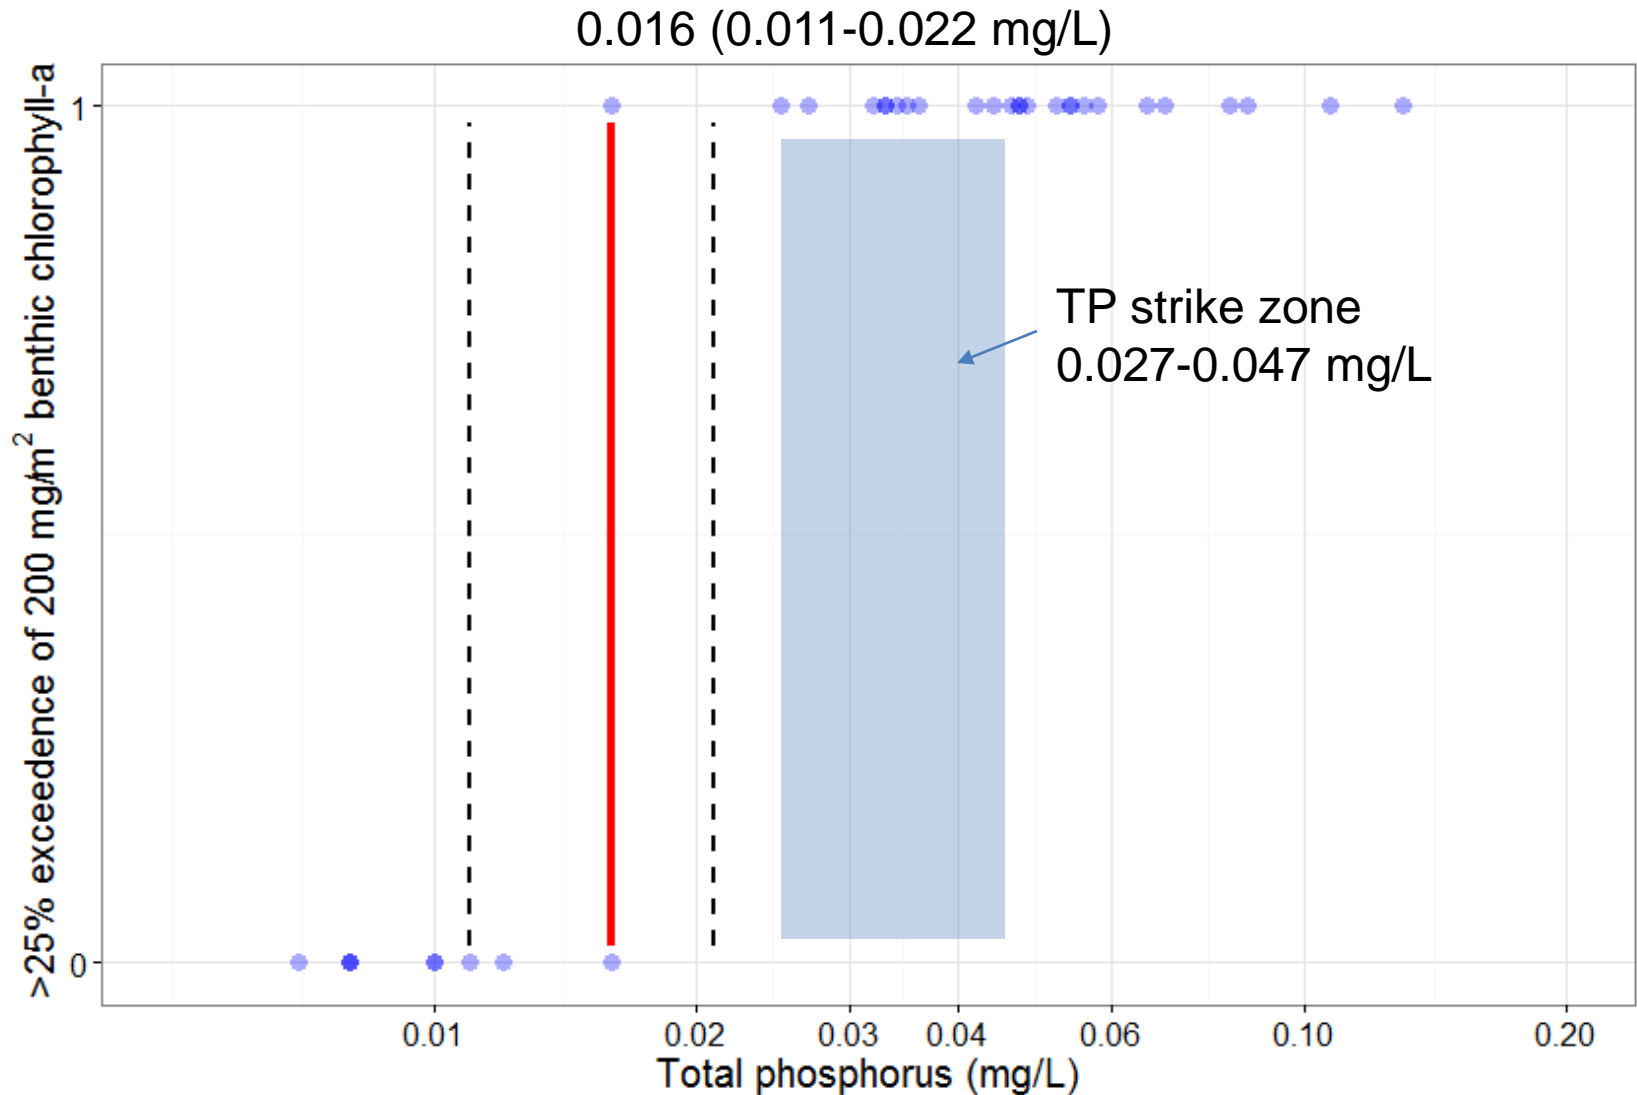

Mean chlorophyll vs. *Cladophora* biovolume, Year 1 (June 2014-April 2015)

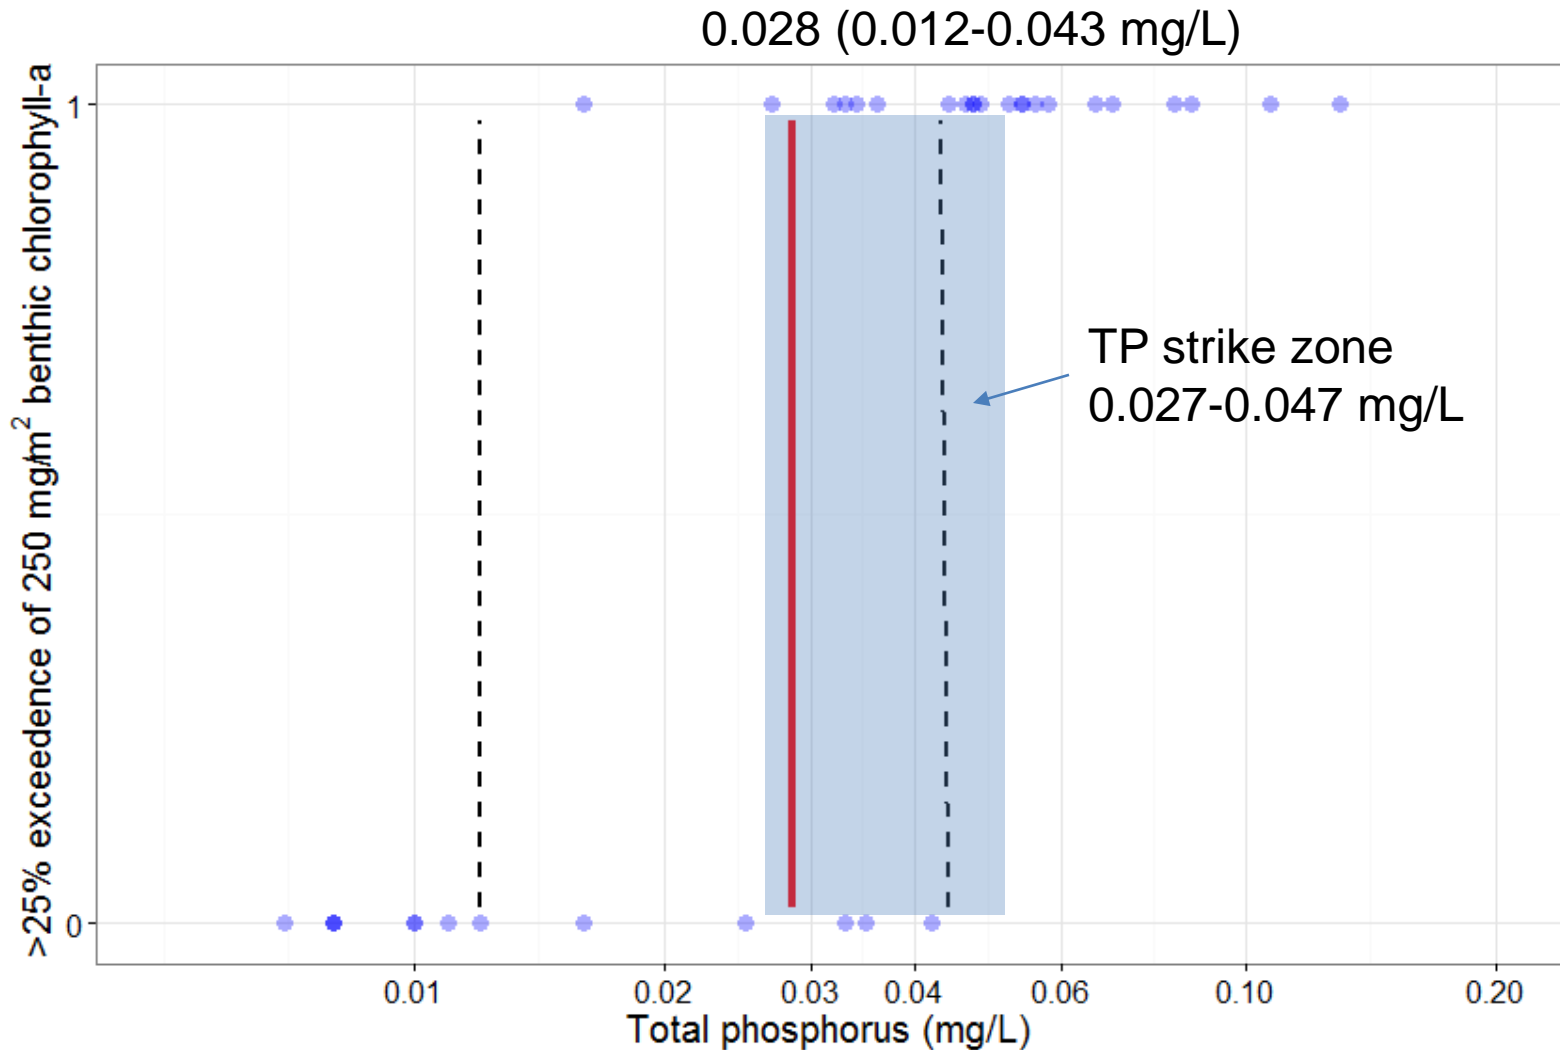

Mean chlorophyll vs. *Cladophora* biovolume, Year 2 (April 2015- April 2016)

CHLA (200 mg/m²) exceedance frequency >25% TP change points (binomial)

CHLA (250 mg/m²) exceedance frequency >25% TP change points (binomial)

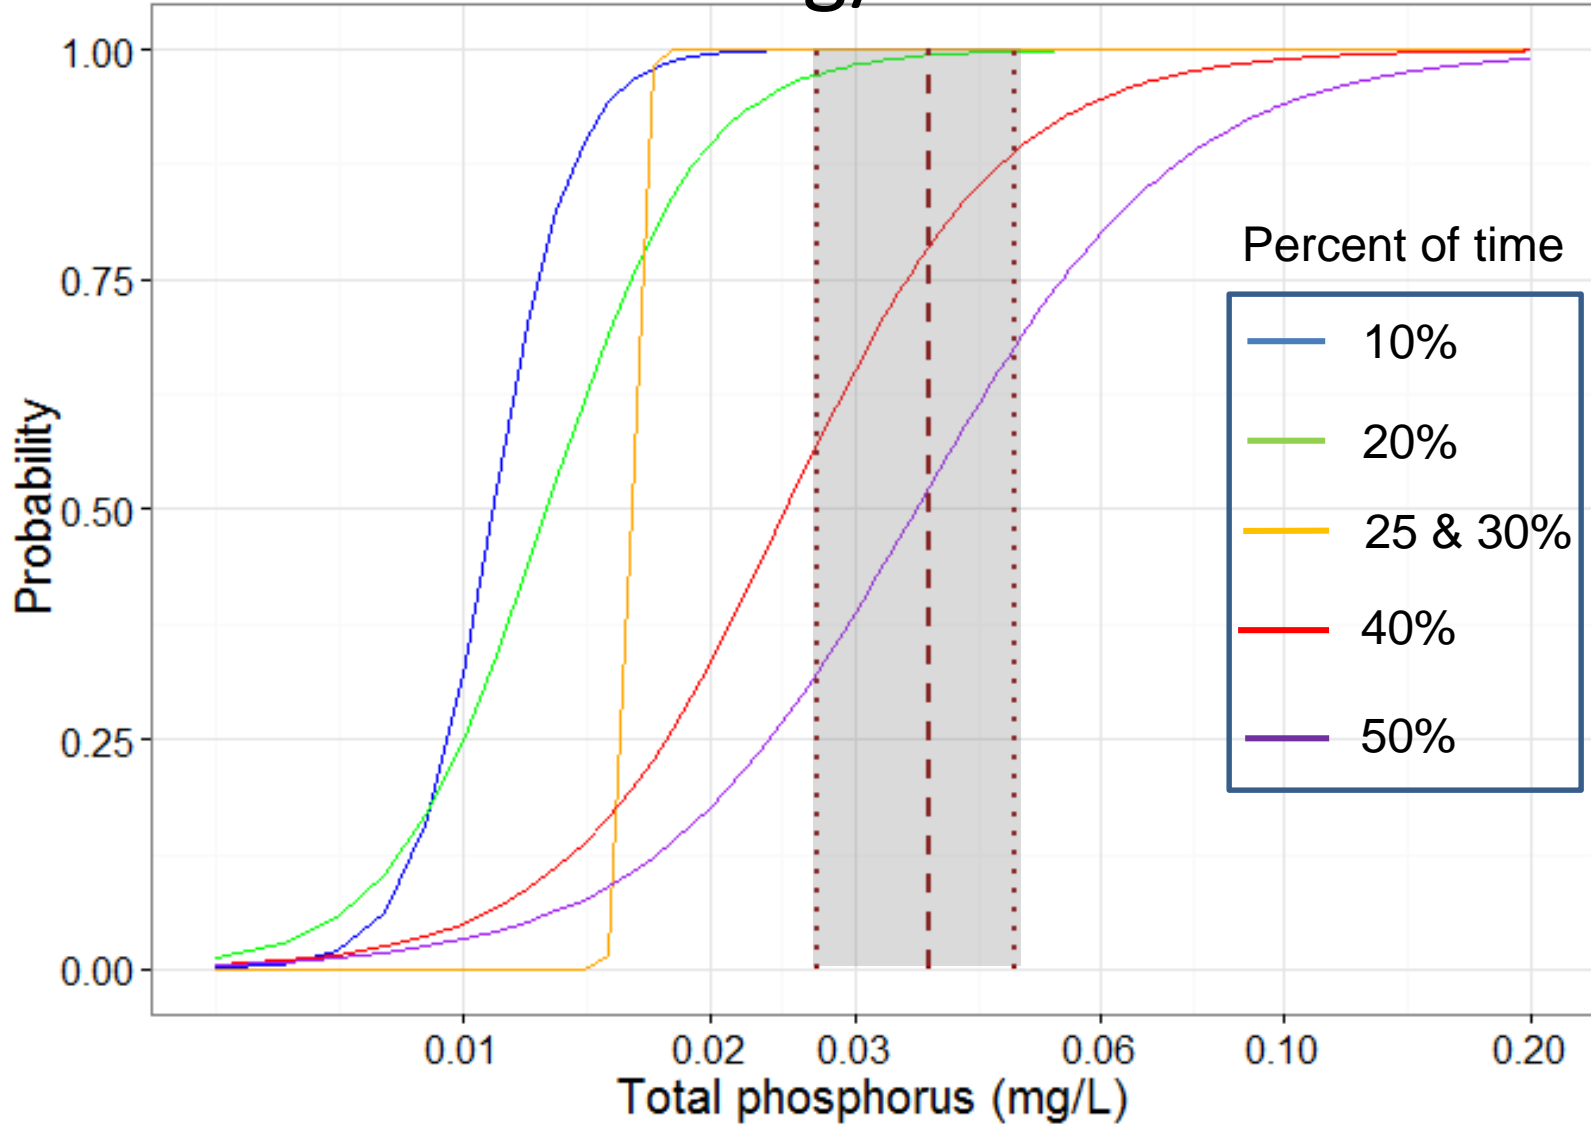

CHLA (300 mg/m^2) exceedance frequency $>25\%$ TP change points (binomial)

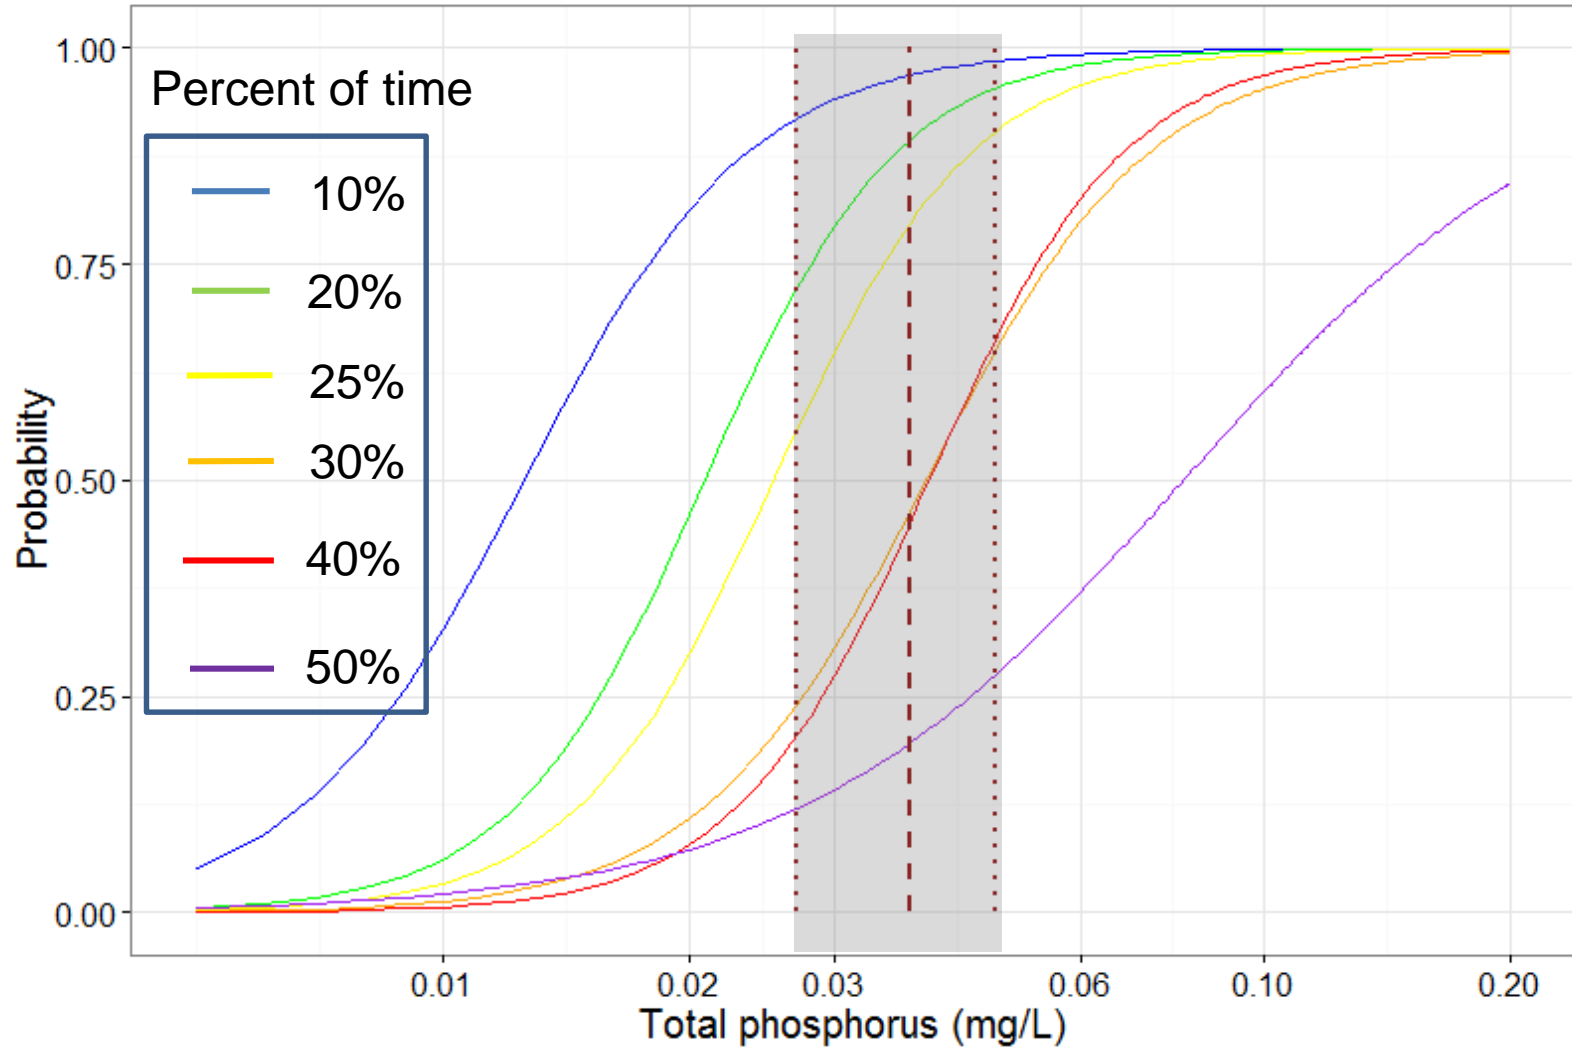

TP change points (binomial) for CHLA frequency of exceedance

CHLA mg/m ²	Exceedance frequency	TP change point (mg/L)	Bootstrap quantiles (TP, mg/L)			p value
			5%	50%	95%

300	50%	0.065	0.094	0.131

Exceedance frequency of 300 mg/m² CHLA (n=12 events)

Exceedance frequency at 200, 250, and 300 mg/m² CHLA (TP on log scale)

Exceedance frequency of 200, 250, and 300 mg/m² CHLA

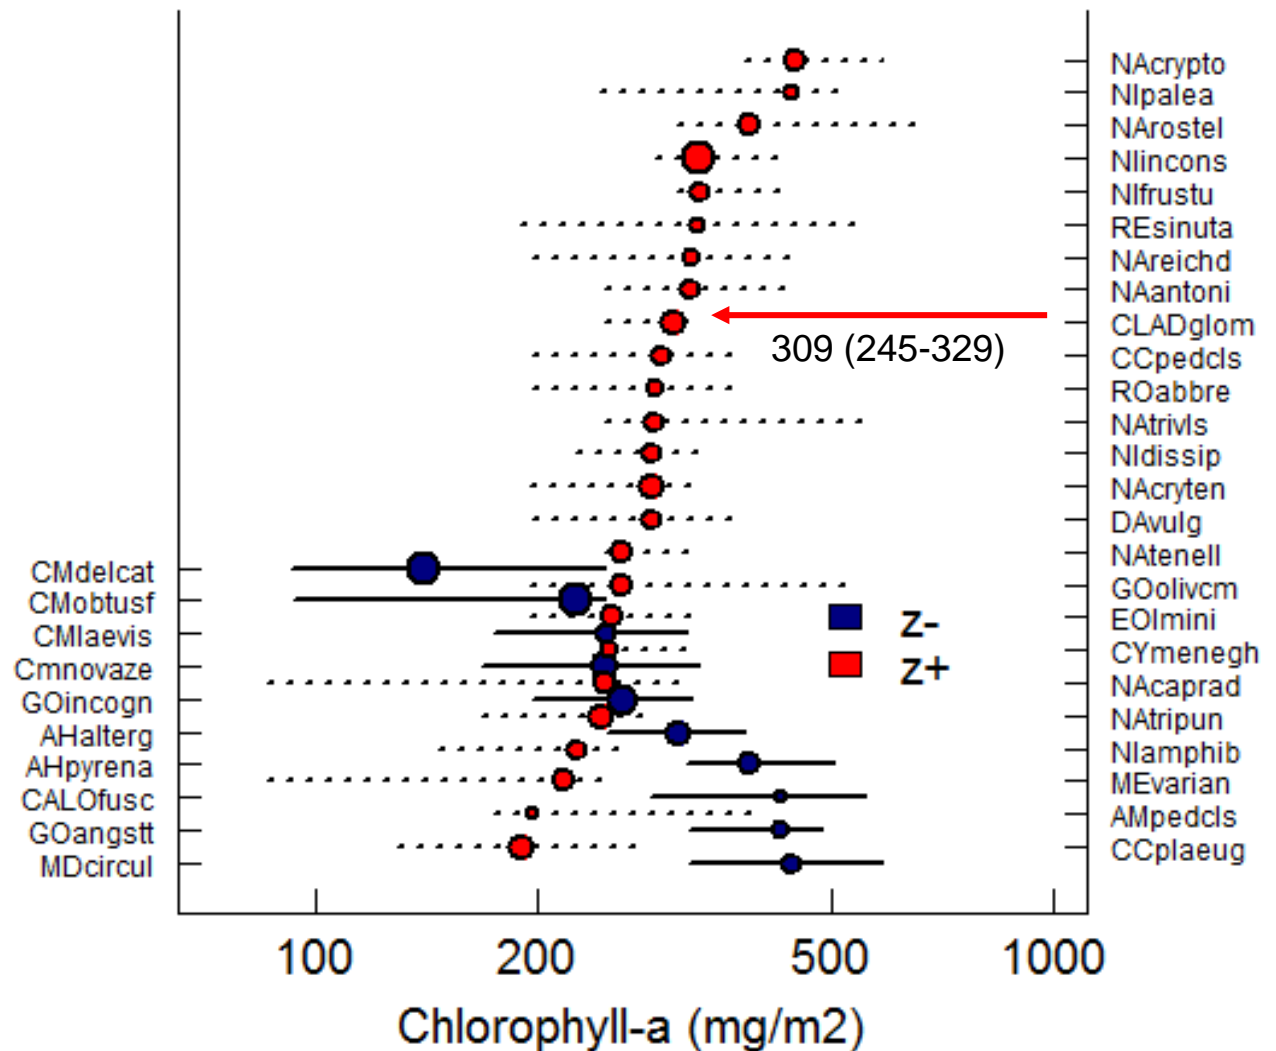

TITAN: Mean chlorophyll-a as predictor.

Year 1 (June 2014- April 2015)

Sum(z-) community-level change point
= 245 (168-386) mg/m²

Sum(z+) change point
= 309 mg/m²

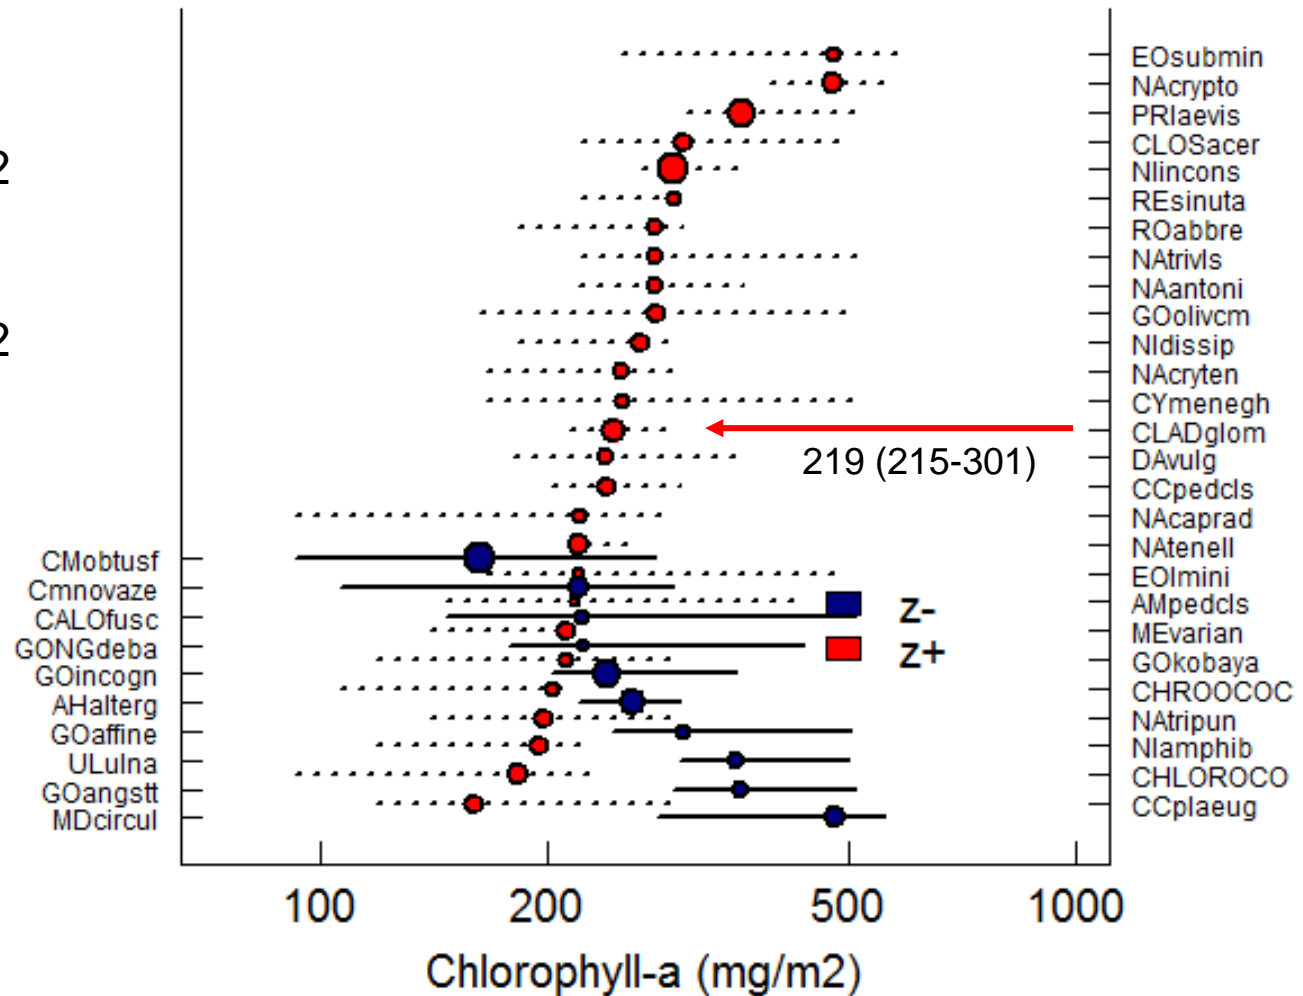

TITAN: Mean chlorophyll-a as predictor.

Year 1.5 (October 2014-October 2015)

Sum(z-) community-level change point
= 296 (166-376) mg/m²

Sum(z+) change point
= 293 (183-299) mg/m²

TITAN: Mean chlorophyll-a as predictor.

Year 2 (June 2015-April 2016)

Sum(z-) community-level change point = 90 (84-121) mg/m²

Sum(z+) change point = 134 (106-217) mg/m²

Geometric vs. arithmetic mean TP: 2 year data (n=12 events)

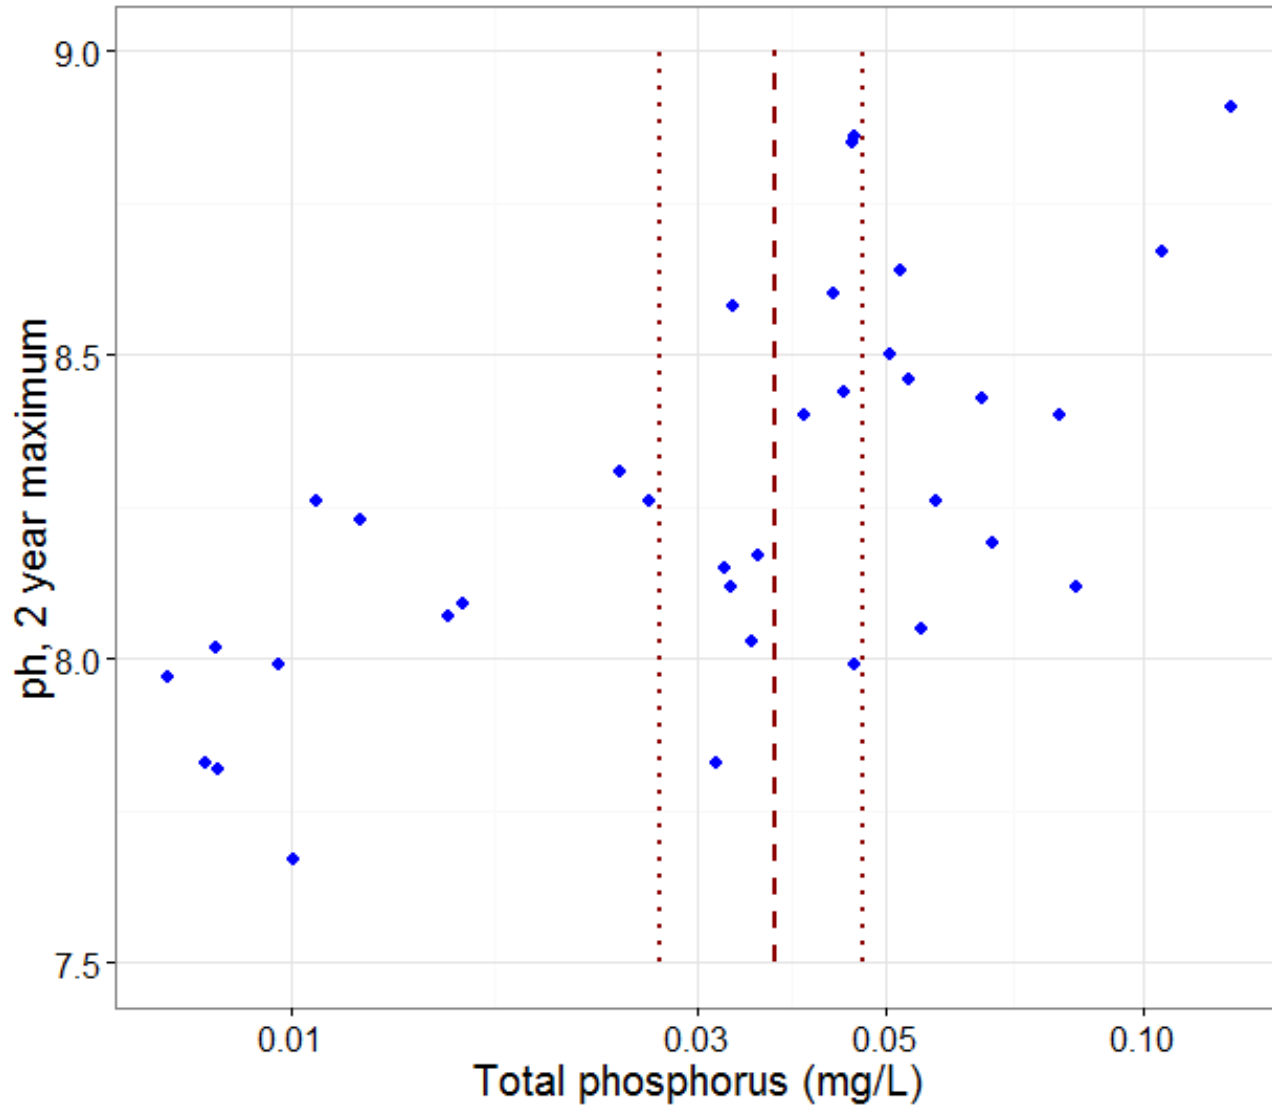

EXO1 sonde instantaneous and 48-h data

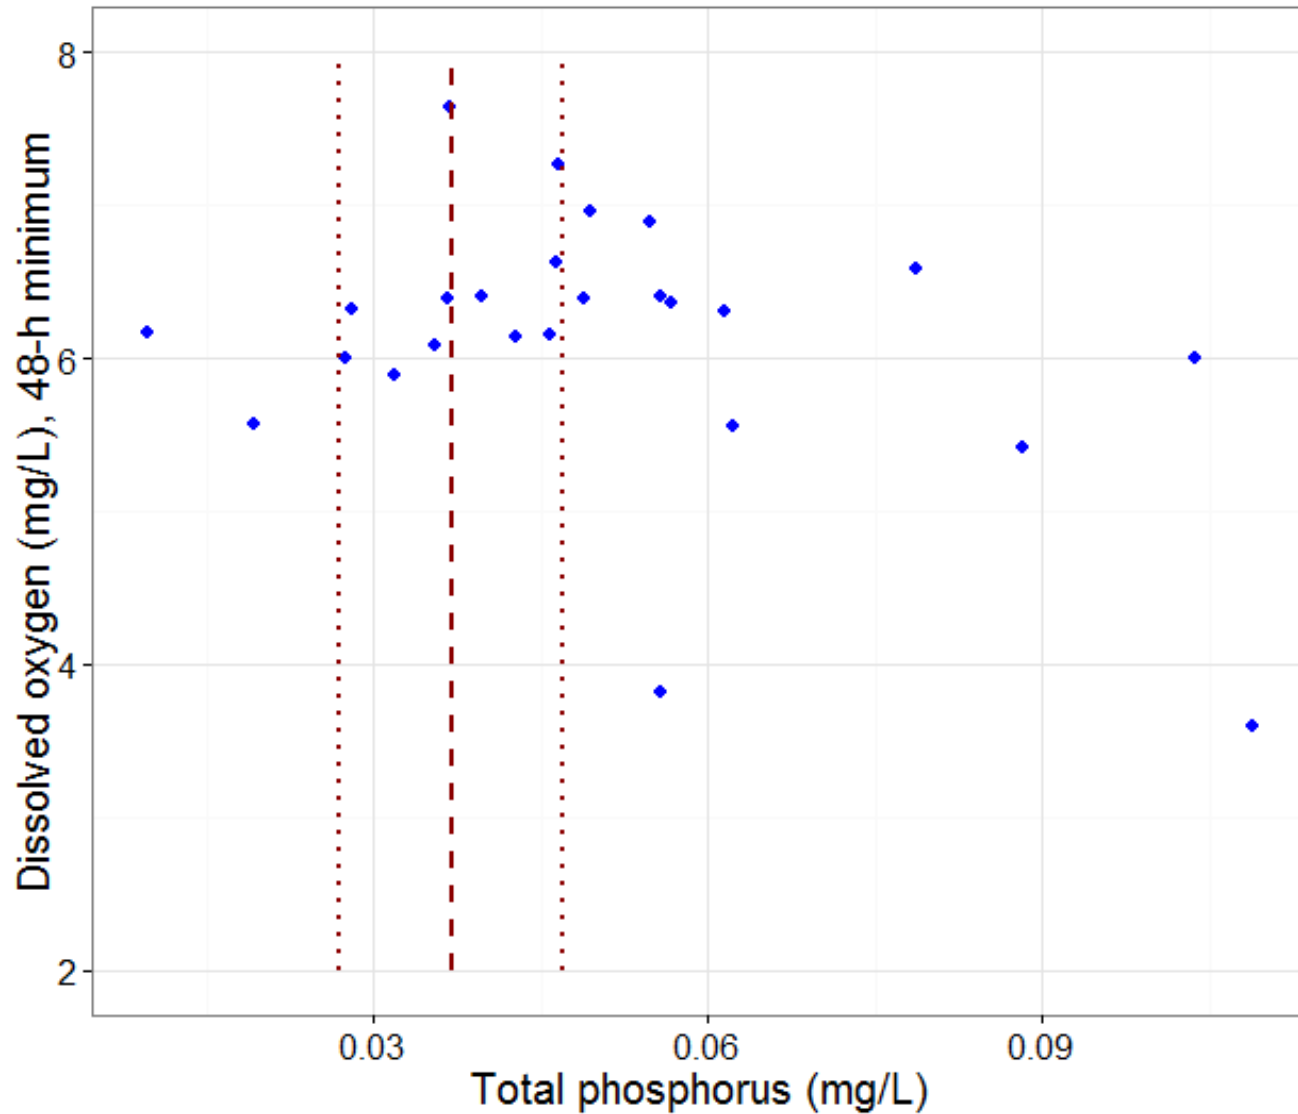

TP vs. DO (2-y maximum, n=12)

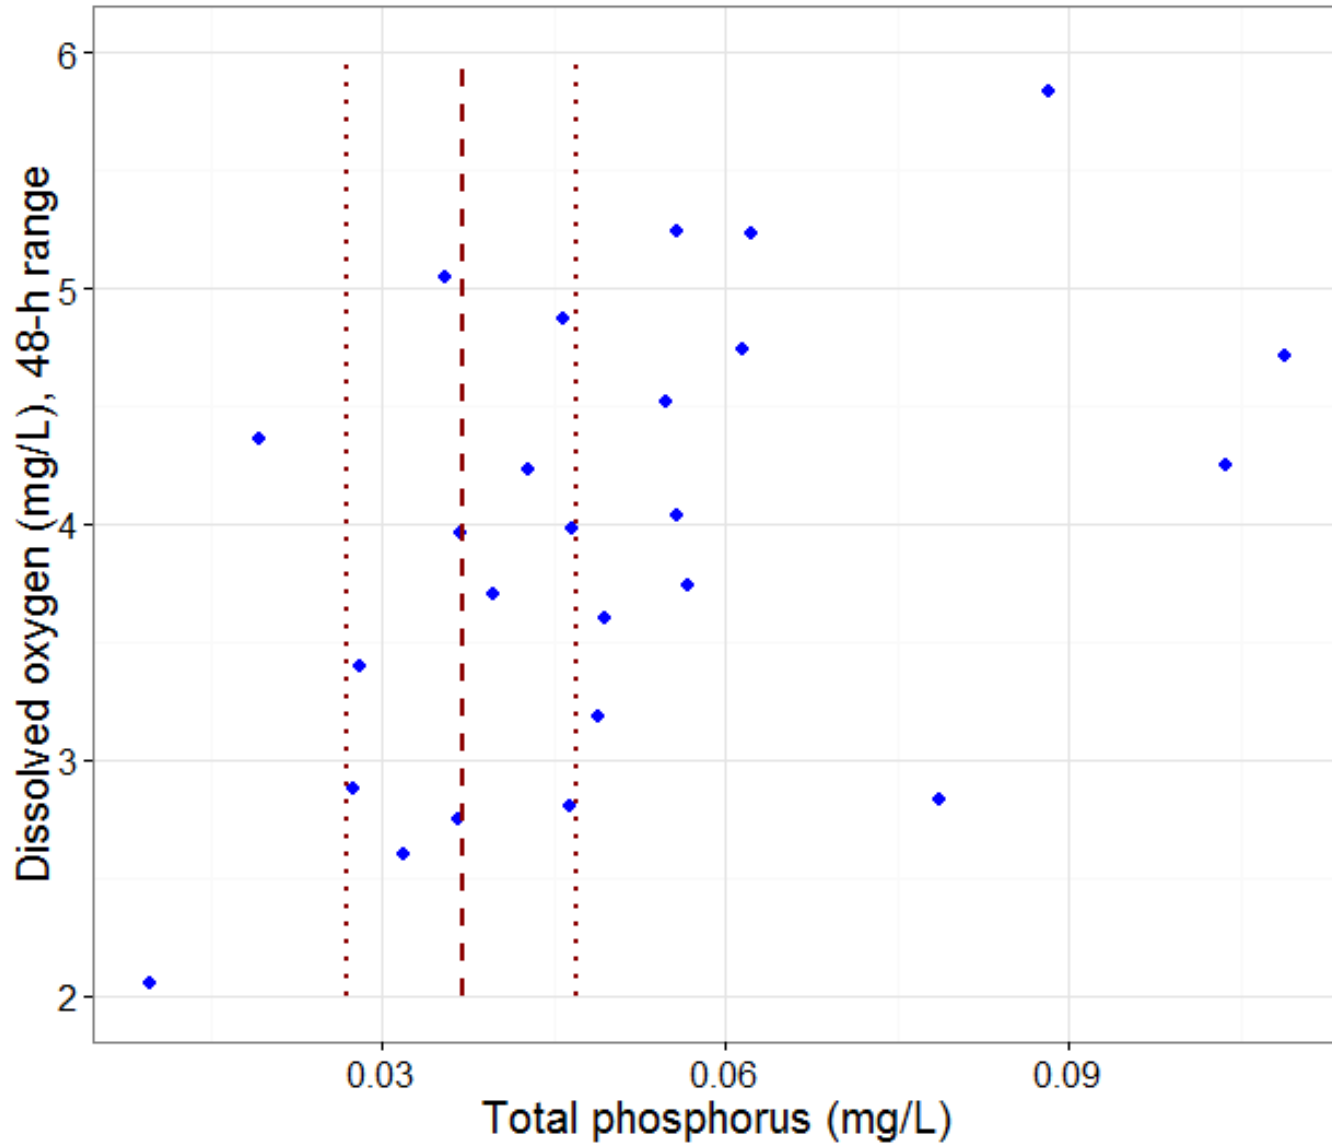

TP vs. pH (2-y maximum, n=12)

TP vs. DO, 48-h minimum, Sep 2015

TP vs. DO, 48-h range, Sep 2015

TP vs. pH, 48-h range, Sep 2015
